

PRODUCT KNOWLEDGE:

Course Length: 2 days

Tuition Cost: \$150

Course Description: The first portion of the course will introduce the ChemSpec USA product lines to the student. Topics will include fundamentals of paint and proper application in the repair shop. The program will be broken up to include classroom discussion and hands on training in the application workshop. The second portion of the course will include fundamentals of paint mixing as well as color theory and adjustment. The majority of the program will use pre-colored panels to evaluate and discuss how to adjust for improved matches. The program will consist of primarily classroom discussion and some hands-on training in the application workshop.

Who Should Attend: The paint technician who is looking to improve their knowledge of our product lines and their recommended usage. Students wanting to understand application procedures.
